

Thanks for considering the following view point.

The USA was founded on time proven Christian & Judeo principles going back to the creation of heaven & earth, with man as God's Fiat creation, given the command to beneficially utilize these God-given resources of this planet. Our economy is reliant upon strong agriculture. We must feed ourselves and those around us from the resources of the wonderful Columbia River & it's tributaries. Our economy will flourish if we utilize this resource to it's full potential. Water is renewable & God is the designer of His wonderful recycling system. We must combat those who are bent on promoting an agenda which is designed to break America and relinquish this great nation to 2nd rate status.

Please do all you can to ensure that we utilize the resources as fully as we can by sustaining the existing dams & waterways to provide water for agricultural uses. All other uses should be subservient to beneficial agricultural production. Our economies can flourish and technology advance as we encourage the most beneficial uses of the Columbia. We must not allow political correctness to taint scientific research. I encourage you to consider these basic Christian / Judeo principles to guide us in further utilization of this God-given resource.

Respectfully,
Richard Beck
